SUMMARY

Data and Analytics professional with 12+ years building and owning end-to-end analytics infrastructure across healthcare and SaaS. Deep expertise in dbt, Airflow orchestration, Metaplane observability, and financial data modeling. Trusted by Finance, Operations, Product, and Engineering to resolve complex data problems end-to-end. Active practitioner of AI-assisted development (Claude, Cursor AI, Databricks MCP) applied for root-cause analysis, pipeline debugging, and validation automation.

SKILLS

Data Engineering: dbt, SQL (Advanced), Databricks, ETL/ELT Pipeline Design, Dimensional Modeling, Apache Airflow, Python, CI/CD for Data Pipelines, Data Lineage, Star Schema, Medallion Architecture

Observability & Governance: Metaplane, Data Contracts, SLA Analytics, Audit Compliance, Data Governance, Data Quality

AI & Emerging Tools: Claude, Cursor AI, Databricks MCP, AI-Assisted Development, Large-Scale AI-Driven Data Querying, LLM-Aided Root-Cause Analysis

Analytics & Visualization: KPI Dashboards, Looker, Tableau, Operational Data Modeling, Executive Reporting, QlikView, OLAP

Leadership & Domain: Code Review, Team Mentorship, Cross-Functional Stakeholder Management, Financial Reconciliation, Revenue Analytics, Operational Analytics

EXPERIENCE

Senior Business Intelligence Engineer | Blink Health | Remote

Oct 2021 – Present

dbt · Metaplane · Airflow · Databricks · SQL · Python · Claude · Cursor AI

- Architected the data foundation that resolved a \$1.56M vendor payment discrepancy — standardizing source data, correcting business logic, and ensuring invoice-to-payment accuracy.
- Eliminated a 4.5% variance between customer payment data and reported revenue by owning end-to-end traceability and building a scalable data pipeline, strengthening audit compliance.
- Designed a unified data model supporting 200K+ monthly transactions, delivering end-to-end operational visibility across Finance, Product, and Pharmacy Operations.
- Drove a 30% operational efficiency gain by identifying queue management and task-allocation bottlenecks, then delivering data-driven dashboards for Pharmacy Operations.
- Led the implementation of a centralized financial data platform, eliminating manual dependencies and accelerating reporting from bi-monthly to daily.
- Deployed Claude and Cursor as investigation copilots to trace data lineage, identify pipeline breakpoints, and materially cut manual debugging cycles.
- Leveraged Databricks MCP for AI-driven querying of large-scale datasets, accelerating deep-dive analysis and real-time failure isolation.
- Built an AI-assisted identifier resolution layer using lookup-based logic, unifying fragmented entity mappings and maintaining downstream accuracy with incomplete source data.
- Embedded AI-assisted tooling into BI validation workflows, raising team throughput and establishing a higher quality baseline across data pipelines.
- Built and tested dbt models alongside data dictionaries and transformation logic documentation, improving data reliability and trust across downstream reporting.
- Modeled and maintained semantic layers using dbt, establishing consistent metric definitions and fostering alignment across cross-functional teams.
- Set up proactive data pipeline monitoring through Metaplane, triggering alerts for potential SLA breaches and enabling timely intervention to maintain data availability.

- Onboarded new data analysts with intensive training on data governance policies and data quality standards, accelerating integration into project teams.

Business Intelligence Engineer | Sky IT Group | New York, NY

Mar 2016 – Oct 2021

SQL · Python · ETL Pipeline Design · Dimensional Modeling · QlikView · Tableau

- Drove a 70% improvement in data delivery performance by redesigning and optimizing ETL pipelines across client environments.
- Cut manual data-validation effort by 40% by automating repetitive quality checks in ETL pipelines, freeing 5+ engineering hours/week for higher-value work.
- Accelerated dashboard development by 50% by building reusable BI frameworks and standardized reporting components, enabling faster delivery across analytics teams.
- Saved 100% of incremental licensing cost by proposing and implementing an in-house On-Demand Reporting environment using QlikView and Python, eliminating third-party dependency.
- Facilitated training sessions on standardized reporting components, resulting in increased adoption of consistent metrics and improved data accuracy across analytics teams.

EDUCATION

The University of Texas at Dallas | Dallas, TX

Aug 2013 – May 2015

MS – Information Technology and Management

Don Bosco Institute of Technology | Mumbai, India

Aug 2006 – Sep 2010

BE – Information Technology
